Profile

Diploma student in Software Engineering seeking an internship opportunity. Interested in AI engineering and mobile application development, with practical experience in programming, databases, networking, web and mobile development, testing, IoT, Machine Learning and System Administration

Technical Skills

Languages: PHP, SQL
Backend: Laravel (Eloquent, Blade)
Database: PostgreSQL
Systems: Linux, NixOS
Tools: Git, GitHub

Education

Diploma in Software Engineering Jan 2025 – Dec 2027
German-Malaysian Institute (GMI) Bangi, Kajang

- Developed practical skills in software engineering, programming, web and mobile development, databases, networking, testing, IoT, Machine Learning and System Administration.

Projects

Synergy Zyklen — Referral & Reward Platform | Final Year Project July 2026 – Jun 2027

- Full-stack development of a cycle-based referral and reward platform, digitising a manual profit-sharing model into an automated web system.
- Built the core cycle engine in PHP/Laravel: sales are tracked in cycles of 1 to 12 units, and each completed cycle automatically credits RM 18 to the buyer and RM 6 to the referrer.
- Laravel MVC backend with Eloquent ORM and Blade templates over PostgreSQL, role-based authentication for buyers, referrers and administrators, and integration for payouts. Deployed on Hostinger.
- Delivered an in-house POS module for Walla Cafe on a staff-exclusive route within the same codebase, replacing their third-party system:
  - Menu management, receipt printing and payments.
  - Zyklen cycle and reward logic wired directly into the sales flow, so café purchases feed the reward model.
  - Tablet-and-Bluetooth-printer deployment.
  - Documented internet dependency as a known limitation of the web-based POS approach.
- Worked in a team of 3 across the full stack: database design, backend logic, and frontend views.

Certifications

CCNA: Introduction to Networks
Cisco Networking Academy
Credential: Credly

Additional Information

Location: Putrajaya, Malaysia
Career Interests:

- Full Stack Development
- Mobile Application Development
- Backend Development
- Linux System Administrator
